
ADVANCED AURICULOTHERAPY AND VAS

Application of vascular signal of Nogier

FRENCH/ENGLISH

23rd, 24th, 26th and 27th of APRIL 2019 (4 days)

Seminar targets:

The aim of this seminar is to study and to learn how to use the famous Auriculo-Cardiac Reflex, also called Vascular Autonomic Signal (VAS) or the vascular signal of Nogier. This vascular signal is perceptible on distal arteries, principally on the radial artery, and gives the practitioner the possibility to state a diagnosis in general medical practice, as well as in auriculotherapy.

This seminar is exceptional for several reasons. First, English speaking seminars on VAS are rare. Second, a big part will be dedicated to practice.

Speaker:

Raphaël Nogier (M.D.), is practitioner in auriculotherapy for more than thirty years.

Author of numerous publications about auriculotherapy, he is teaching this discipline all over the world.

He was president of the working group on the standardisation of the ear point nomenclature for the WHO.

At present, doctor Raphaël Nogier is president of GLEM – Lyon Medical Studies Group, which assembles a large number of medical doctors working in the field of auriculotherapy.

Being the son of Paul Nogier, who is the inventor of auriculotherapy, Raphaël Nogier worked close with his father for many years.

Translation (French-English):

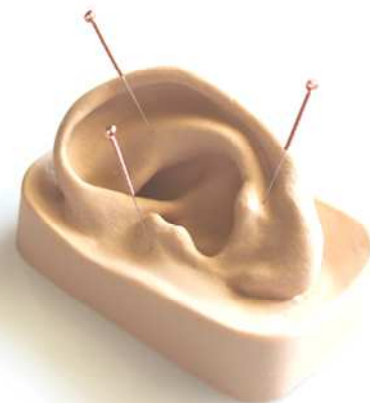

Will be assured by a specialist in medical translation.

SEMINAR PROGRAMME

TUESDAY, the 23rd of APRIL 2019

- Reminder on auriculotherapy
- Two types of points on the ear
- The most important points on the anterior part of the ear
- The most important points on the posterior part of the ear
- Demonstration for the detection of ear points

- The VAS
- Historical background : Avicène, René Leriche, Paul Nogier
- The terminology
- The radial pulse and the VAS
- How to release a VAS?
- The five steps of Paul Nogier
- Photo-emission and photoreception

WEDNESDAY, the 24th of APRIL 2019

The white light test: How? Why? When to do?

Pathological answer to the white light test:

- Exhaustion phenomenon of the VAS
- Dental focus
- Pathological scar
- How to treat the VAS phenomenon?
- No VAS

Study of frequencies

- Theory of frequencies
- How to do a frequential signature of a lesion?
- How to treat with frequencies?
- The GL+

THURSDAY, the 25th of APRIL 2019 is off

FIRDAY, the 26th of APRIL 2019 is dedicated to hands-on learning

SATURDAY, the 27th of APRIL 2019

How to detect food hypersensitivity?

- Reminder on the food composition
- Reminder on the immune system
- What is food allergy? What is food intolerance?
- The different kinds of allergy
- What are the implicated foods in the hypersensitivity?
- The delayed allergies
- The symptoms and the signs of delayed food allergies
- Importance of the Interview
- The RAFT (radial artery food test)
- How to prepare a food test?
- The protocol of the patient examination
- The RAFT technique
